

Gates COVID-19 Tracker, Week 3 - National

This document includes topline for 7,079 responses to the Gates COVID-19 Tracker fielded April 17-19, 2020. This includes 4,806 responses collected across the U.S., with oversamples in the states of Washington, New York, and Florida (750, 754, and 769 responses, respectively). The topline report on the percentage of survey-takers who selected each response, weighted to the U.S. general population (adults aged 18+) in Civis' consumer file.

Each question is labeled by its question tag (which was included in the Questionnaire document in brackets) and the question text. Some questions were only shown to a subset of respondents; the number of responses to each question is indicated by "N = " in the label. A description of the subset who were shown the question is also included below the question text, indicated by "Displayed if:" or "Shown to."

For some questions in the disease tracking section, we've provided two versions of the percentage of survey-takers for questions with display logic where it would be most helpful. On the left, "Percent of asked" represent the percentage of respondents who were asked the question; on the right, "Percent of all resp" represent the percentage of all respondents, with an additional entry for "(Not asked)."
