

Gates COVID-19 Tracker, Wave 7 - Ohio

This document includes toplines for 755 responses to the Gates COVID-19 Tracker fielded June 9-14, 2020 in the state of Ohio. The toplines report on the percentage of survey-takers who selected each response, weighted to Ohio's general population (adults aged 18+) in Civis' consumer file. National toplines from this week are also provided for each question response for comparison.

Each question is labeled by its question tag (which was included in the Questionnaire document in brackets) and the question text. Some questions were only shown to a subset of respondents; the number of responses to each question is indicated by "N =" in the label. A description of the subset who were shown the question is also included below the question text, indicated by "Displayed if:" or "Shown to."

For some questions in the disease tracking section, we've provided two versions of the percentage of survey-takers for questions with display logic. On the left, "US (asked)" or "OH (asked)" represent the percentage of respondents who were asked the question; on the right, "US (all resp)" or "OH (all resp)" represent the percentage of all respondents, with an additional entry for "(Not asked)."

Covid Contact Tracing Compelling Reasons: N = 755

Contact tracing is an essential tool used by public health professionals. Trained interviewers contact people with COVID-19 to help them remember who they had close contact with. The interviewers then call those close contacts to notify them of possible exposure. The identity of the person with COVID-19 is kept confidential and never revealed to their contacts. Every person called or interviewed receives information about how to keep themselves and others safe and healthy, and about support resources that are available. Which of the following are the most compelling reasons to cooperate with contact tracers? Select all that apply.

US Margin of Error = 1.5%, OH Margin of Error = 4.2%

Reason	US	OH
Contact tracing helps slow the spread of COVID-19	44.6%	42.1%
Contact tracing helps the economy stay open	20.8%	20.3%
Contact tracing helps prevent another stay-at-home order	26.5%	23.5%
Contact tracing finds and isolates new infections before they spread	38.0%	35.1%
Public health employees regularly use contact tracing to slow the spread of different infectious diseases	26.2%	23.5%
Contact tracing has been used for decades to combat diseases like tuberculosis, HIV/AIDS, polio and measles	21.4%	19.3%
Contact tracing is free and provided by health department employees and partners	23.4%	20.7%
Participation in contact tracing is voluntary	20.0%	19.5%
The information from contact tracing is strictly confidential and used only to help slow the spread of disease	33.2%	32.1%
