

Gates COVID-19 Tracker, Wave 9 - Texas

This document includes toplines for 753 responses to the Gates COVID-19 Tracker fielded July 17-20, 2020 in the state of Texas. The toplines report on the percentage of survey-takers who selected each response, weighted to Texas's general population (adults aged 18+) in Civis' consumer file. National toplines from this week are also provided for each question response for comparison.

Each question is labeled by its question tag (which was included in the Questionnaire document in brackets) and the question text. Some questions were only shown to a subset of respondents; the number of responses to each question is indicated by "N =" in the label. A description of the subset who were shown the question is also included below the question text, indicated by "Displayed if:" or "Shown to."

For some questions in the disease tracking section, we've provided two versions of the percentage of survey-takers for questions with display logic. On the left, "US (asked)" or "TX (asked)" represent the percentage of respondents who were asked the question; on the right, "US (all resp)" or "TX (all resp)" represent the percentage of all respondents, with an additional entry for "(Not asked)."

Covid Contact Tracing Compelling Reasons: N = 753

Contact tracing is an essential tool used by public health professionals. Trained interviewers contact people with COVID-19 to help them remember who they had close contact with. The interviewers then call those close contacts to notify them of possible exposure. The identity of the person with COVID-19 is kept confidential and never revealed to their contacts. Every person called or interviewed receives information about how to keep themselves and others safe and healthy, and about support resources that are available. Which of the following are the most compelling reasons to cooperate with contact tracers? Select all that apply.

US Margin of Error = 1.4%, TX Margin of Error = 5%

| Reason | US | TX |
|--|-------|-------|
| Contact tracing helps slow the spread of COVID-19 | 45.6% | 44.3% |
| Contact tracing helps the economy stay open | 22.5% | 22.8% |
| Contact tracing helps prevent another stay-at-home order | 27.3% | 25.5% |
| Contact tracing finds and isolates new infections before they spread | 39.3% | 33.6% |
| Public health employees regularly use contact tracing to slow the spread of different infectious diseases | 29.6% | 27.2% |
| Contact tracing has been used for decades to combat diseases like tuberculosis, HIV/AIDS, polio and measles | 23.1% | 20.2% |
| Contact tracing is free and provided by health department employees and partners | 26.4% | 22.2% |
| Participation in contact tracing is voluntary | 21.5% | 19.3% |
| The information from contact tracing is strictly confidential and used only to help slow the spread of disease | 35.1% | 34.7% |
