

Gates COVID-19 Tracker, Wave 10 - National

This document includes toplines for 8,511 responses to the Gates COVID-19 Tracker fielded August 20-23, 2020. This includes 4,652 responses collected across the U.S., with oversamples in the states of Florida, New York, Ohio, Texas, and Washington (772, 808, 751, 775, and 753 responses, respectively). The toplines report on the percentage of survey-takers who selected each response, weighted to the U.S. general population (adults aged 18+) in Civis' consumer file. Each question is labeled by its question tag (which was included in the Questionnaire document in brackets) and the question text. Some questions were only shown to a subset of respondents; the number of responses to each question is indicated by "N = " in the label. A description of the subset who were shown the question is also included below the question text, indicated by "Displayed if:" or "Shown to."

For some questions in the disease tracking section, we've provided two versions of the percentage of survey-takers for questions with display logic where it would be most helpful. On the left, "Percent of asked" represent the percentage of respondents who were asked the question; on the right, "Percent of all resp" represent the percentage of all respondents, with an additional entry for "(Not asked)."

Covid Contact Tracing Compelling Reasons: N = 8511

Contact tracing is an essential tool used by public health professionals. Trained interviewers contact people with COVID-19 to help them remember who they had close contact with. The interviewers then call those close contacts to notify them of possible exposure. The identity of the person with COVID-19 is kept confidential and never revealed to their contacts. Every person called or interviewed receives information about how to keep themselves and others safe and healthy, and about support resources that are available. Which of the following are the most compelling reasons to cooperate with contact tracers? Select all that apply.

Margin of error = 1.3%

Reason	Selected
Contact tracing helps slow the spread of COVID-19	48.1%
Contact tracing helps the economy stay open	24.8%
Contact tracing helps prevent another stay-at-home order	27.7%
Contact tracing finds and isolates new infections before they spread	40.5%
Public health employees regularly use contact tracing to slow the spread of different infectious diseases	30.0%
Contact tracing has been used for decades to combat diseases like tuberculosis, HIV/AIDS, polio and measles	24.0%
Contact tracing is free and provided by health department employees and partners	27.4%
Participation in contact tracing is voluntary	22.1%
The information from contact tracing is strictly confidential and used only to help slow the spread of disease	35.7%
None of the above	11.2%
